

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

Claims 1-5 (canceled).

6. (previously presented): An information recording and reproducing apparatus comprising:

a first reproducing device for reproducing audio information from a first information record medium, in which the audio information is recorded;

a recording device for recording the reproduced audio information into a second information record medium;

a second reproducing device for reproducing the audio information recorded in said second information record medium; and

a controlling device for setting a recording speed when recording the audio information into said second information record medium and a reproducing speed when reproducing the audio information from said second information record medium such that the recording speed is equal to or higher than the reproducing speed, and controlling said second reproducing device and said recording device so as to perform reproducing the recorded audio information from said second information record medium at the set reproducing speed in parallel to recording the audio information into said second information record medium at the set recording speed,

wherein said controlling device controls said recording device so as to record information indicative of a portion of the audio information, which is being recorded at a time of stopping a

AMENDMENT UNDER 37 C.F.R. § 1.116
U.S. Appln. No. 09/715,009

recording operation of recording the audio information into said second information record medium, into said second information record medium and then stop the recording operation, when the recording operation is to be stopped in a middle of recording the audio information into said second information record medium.

13 7. (previously presented): An information recording and reproducing apparatus according to Claim 6, wherein said controlling device controls said recording device so as to output stop information indicative of stopping the recording operation when the recording operation is to be stopped in the middle.

8. (original): An information recording and reproducing apparatus according to Claim 6, wherein

the recording operation is stopped by stopping a main electric power supplying device for supplying an electric power to said information recording and reproducing apparatus in a normal operation, and

said information recording and reproducing apparatus further comprises a sub electric power supplying device for supplying an electric power to said information recording and reproducing apparatus after said main electric power supplying device is stopped.

9. (previously presented): An information recording and reproducing apparatus comprising:

a first reproducing device for reproducing audio information from a first information record medium, in which the audio information is recorded;

a recording device for recording the reproduced audio information into a second information record medium;

a second reproducing device for reproducing the audio information recorded in said second information record medium; and

13 a controlling device for setting a recording speed when recording the audio information into said second information record medium and a reproducing speed when reproducing the audio information from said second information record medium such that the recording speed is equal to or higher than the reproducing speed, and controlling said second reproducing device and said recording device so as to perform reproducing the recorded audio information from said second information record medium at the set reproducing speed in parallel to recording the audio information into said second information record medium at the set recording speed,

further comprising a compressing device for reproducing the recorded audio information from said second information record medium, compressing the reproduced audio information, and recording again the compressed reproduced audio information into said second information record medium.

Claim 10 (canceled).

11. (previously presented): An information recording and reproducing apparatus comprising:

a first reproducing device for reproducing audio information from a first information record medium, in which the audio information is recorded;

a recording device for recording the reproduced audio information into a second information record medium;

a second reproducing device for reproducing the audio information recorded in said second information record medium; and

3 a controlling device for setting a recording speed when recording the audio information into said second information record medium and a reproducing speed when reproducing the audio information from said second information record medium such that the recording speed is equal to or higher than the reproducing speed, and controlling said second reproducing device and said recording device so as to perform reproducing the recorded audio information from said second information record medium at the set reproducing speed in parallel to recording the audio information into said second information record medium at the set recording speed,

wherein

on said second information record medium, map information to control a navigation function is further recorded, and

said information recording and reproducing apparatus further comprises a navigation device for controlling the navigation function by using the map information.

12. (original): An information recording and reproducing apparatus comprising:

a first reproducing device for reproducing audio information from a first information record medium, in which the audio information is recorded;

a recording device for recording the reproduced audio information into a second information record medium;

a second reproducing device for reproducing the audio information recorded in said second information record medium; and

a controlling device for controlling said recording device to record the audio information, which is reproduced from said first information record medium by said first reproducing device, when the audio information is outputted as a sound and also controlling said second reproducing device to reproduce and output the audio information as the sound

13. (original): An information recording and reproducing apparatus according to Claim 12, further comprising a converting device for converting a form of the audio information, wherein

said controlling device controls said converting device and said recording device to convert the form of the audio information and then record the audio information when recording the audio information reproduced by said first reproducing device into said second information record medium.

14. (original): An information recording and reproducing apparatus according to Claim 12, further comprising:

a compressing device for compressing the audio information; and

an expanding device for expanding the compressed audio information,

wherein

AMENDMENT UNDER 37 C.F.R. § 1.116
U.S. Appln. No. 09/715,009

said controlling device controls said compressing device and said recording device to compress the audio information and then record the compressed audio information when recording the audio information, which is reproduced by said first reproducing device, into said second information record medium, and

said controlling device controls said second reproducing device and said expanding device to reproduce the compressed audio information, expand the reproduced audio information and then output the expanded audio information as a sound.

Claims 15-20 (canceled).

21. (previously presented): An information recording and reproducing apparatus comprising:

a reproducing device for reproducing audio information from a first information record medium, in which the audio information is recorded;

a recording device for recording the reproduced audio information into a second information record medium; and

a controlling device for controlling said reproducing device and said recording device so as to perform recording the reproduced audio information into said second information record medium in parallel to reproducing the audio information from said first information record medium,

wherein

the audio information is recorded in said first information record medium in a compressed state based on a first compressing method, and

said recording device records the audio information in a compressed state based on a second compressing method, which is different from the first compressing method, into said second information record medium.

22. (previously presented): An information recording and reproducing apparatus comprising:

a reproducing device for reproducing audio information from a first information record medium, in which the audio information is recorded;

a recording device for recording the reproduced audio information into a second information record medium; and

a controlling device for controlling said reproducing device and said recording device so as to perform recording the reproduced audio information into said second information record medium in parallel to reproducing the audio information from said first information record medium,

wherein said controlling device controls said recording device so as to record information indicative of a portion of the audio information, which is being recorded at a time of stopping a recording operation of recording the audio information into said second information record medium, into said second information record medium and then stop the recording operation, when the recording operation is to be stopped in a middle of recording the audio information into said second information record medium.

23. (previously presented): An information recording and reproducing apparatus according to Claim 22, wherein said controlling device controls said recording device so as to output stop information indicative of stopping the recording operation when the recording operation is to be stopped in the middle.

24. (original): An information recording and reproducing apparatus according to Claim 22, wherein

the recording operation is stopped by stopping a main electric power supplying device for supplying an electric power to said information recording and reproducing apparatus in a normal operation, and

said information recording and reproducing apparatus further comprises a sub electric power supplying device for supplying an electric power to said information recording and reproducing apparatus after said main electric power supplying device is stopped.

25. (previously presented): An information recording and reproducing apparatus comprising:

a reproducing device for reproducing audio information from a first information record medium, in which the audio information is recorded;

a recording device for recording the reproduced audio information into a second information record medium; and

a controlling device for controlling said reproducing device and said recording device so as to perform recording the reproduced audio information into said second information record medium in parallel to reproducing the audio information from said first information record medium,

3 further comprising a compressing device for judging the audio information which is recorded in a non-compressed state from among the audio information recorded in said second information record medium, reproducing the judged audio information in the non-compressed state from said second information record medium, compressing the reproduced audio information by applying a predetermined compressing process onto the reproduced audio information, and recording again the compressed audio information into said second information record medium.

Claim 26 (canceled).

27. (previously presented): An information recording and reproducing apparatus comprising:

a reproducing device for reproducing audio information from a first information record medium, in which the audio information is recorded;

a recording device for recording the reproduced audio information into a second information record medium; and

a controlling device for controlling said reproducing device and said recording device so as to perform recording the reproduced audio information into said second information record

medium in parallel to reproducing the audio information from said first information record medium,

wherein

on said second information record medium, map information to control a navigation function is further recorded, and

said information recording and reproducing apparatus further comprises a navigation device for controlling the navigation function by using the map information.

Claims 28-30 (canceled).

31. (currently amended): An information recording and reproducing apparatus comprising:

a first reproducing device for reproducing audio information from a first information record medium, in which the audio information is recorded;

a recording device for recording the reproduced audio information into a second information record medium;

a second reproducing device for reproducing the audio information recorded in said second information record medium; and

a controlling device for setting a recording speed when recording the audio information into said second information record medium and a reproducing speed when reproducing the audio information from said second information record medium such that the recording speed is equal to or higher than the reproducing speed, controlling said second reproducing device and

said recording device so as to perform reproducing the recorded audio information from said second information record medium at the set reproducing speed in parallel to recording the audio information into said second information record medium at the set recording speed, and controlling said first reproducing device reproducing a recorded non-compressed information faster than normal speed in parallel to recording a compressed information which are converted from the non-compressed information by ~~the~~ a compressing device.

32. (currently amended): An information recording and reproducing apparatus comprising:

a first reproducing device for reproducing audio information from a first information record medium, in which the audio information is recorded;

a recording device for recording the reproduced audio information into a second information record medium;

a second reproducing device for reproducing the audio information recorded in said second information record medium; and

a controlling device for setting a recording speed when recording the audio information into said second information record medium and a reproducing speed when reproducing the audio information from said second information record medium such that the recording speed is equal to or higher than the reproducing speed, controlling said second reproducing device and said recording device so as to perform reproducing the recorded audio information from said second information record medium at the set reproducing speed in parallel to recording the audio information into said second information record medium at the set recording speed,

and controlling said first reproducing device reproducing a recorded compressed information faster than normal speed in parallel to recording a compressed information which are converted from the recorded compressed information by ~~the~~ a compressing method converter.

33. (currently amended): An information recording and reproducing apparatus comprising:

13
a first reproducing device for reproducing audio information from a first information record medium, in which the audio information is recorded;

a recording device for recording the reproduced audio information into a second information record medium;

a second reproducing device for reproducing the audio information recorded in said second information record medium; and

a controlling device for controlling said first reproducing device reproducing a recorded non-compressed information faster than normal speed in parallel to recording a compressed information which are converted from the non-compressed information by ~~the~~ a compressing device.

34. (currently amended): An information recording and reproducing apparatus comprising:

a first reproducing device for reproducing audio information from a first information record medium, in which the audio information is recorded;

a recording device for recording the reproduced audio information into a second information record medium;

a second reproducing device for reproducing the audio information recorded in said second information record medium; and

a controlling device for controlling said first reproducing device reproducing a recorded compressed information faster than normal speed in parallel to recording a compressed information which are converted from the recorded compressed information by ~~the~~ a compressing method converter.

35. (previously presented): An information recording and reproducing apparatus comprising:

a first reproducing device for reproducing audio information from a first information record medium, in which the audio information is recorded;

a recording device for recording the reproduced audio information into a second information record medium;

a second reproducing device for reproducing the audio information recorded in said second information record medium; and

a controlling device for controlling said first reproducing device reproducing a recorded compressed information in parallel to recording a compressed information which are converted from the recorded compressed information by a compressing method converter and controlling the compressed information being expanded by an expanding device for outputted information to an audio reproducing device.
